

TimeTrax Bio

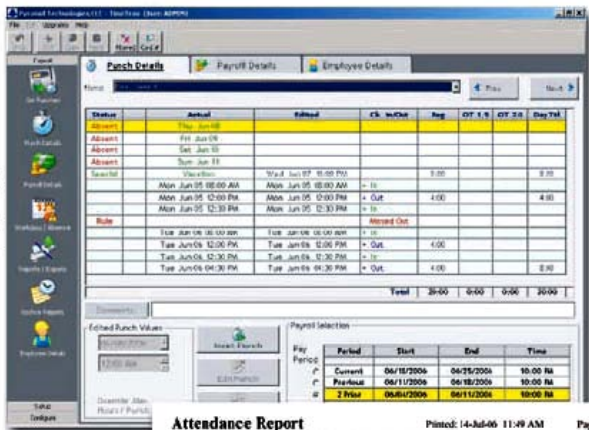

One-touch time and attendance system

The TimeTrax Bio Time and Attendance System offers one-touch operation instantly by an employees' unique fingerprint. Employees clock in and out at the terminal with the swipe of a finger for indisputable time and attendance data. The software records a template of each employee's fingerprint, and associates that template with the corresponding ID number. The use of biometrics makes it impossible for one employee to clock in or out on behalf of another – the practice known as “buddy punching”. Those lost minutes account for lost pounds.
